

Managed Private Cloud

Discover the Power of a VMware Private Cloud.

Run critical applications in a dedicated environment you fully control. With VMware Cloud Foundation 9 (VCF 9) at the core, you gain enterprise-class private cloud that supports modern workloads like AI, Kubernetes, and business-critical applications, without the complexity of building and maintaining your own infrastructure.

Unlike shared public cloud services, a managed VMware private cloud gives you consistent performance, predictable costs, and the ability to align your environment to exact business and regulatory requirements. You own the architecture, visibility, and control, while TierPoint provides the expertise, data center footprint, and ongoing management that keep it secure, resilient, and optimized for your needs.

Unlock the full value of VMware with a private cloud built for performance, resilience, and control.

Confidence in Security & Compliance

Your workloads run in private, dedicated infrastructure hosted in TierPoint's SOC 2, HIPAA, and PCI DSS-compliant data centers. Isolation supports data sovereignty requirements while layered defenses and 24x7 monitoring help protect sensitive information.

Always-On Expertise

VMware-certified experts monitor and manage your environment 24x7x365, working as an extension of your team. Issues are addressed proactively, helping you maintain uptime and performance without stretching internal resources.

Simplified Operations

With VCF 9, compute, storage, networking, and security are unified under a single management plane. This streamlines administration and gives your IT team more time to focus on innovation and business outcomes.

Licensing Flexibility

Bring your own VMware Cloud Foundation subscriptions (BYOS) to maximize the value of your existing investments. A flexible model keeps licensing simple, predictable, and cost-efficient.

Modern Capabilities with VCF 9

VCF 9 adds built-in support for Kubernetes, AI/ML, and advanced automation, making it easier to modernize applications and adopt new technologies. These capabilities turn private cloud into a platform for innovation, not just infrastructure.

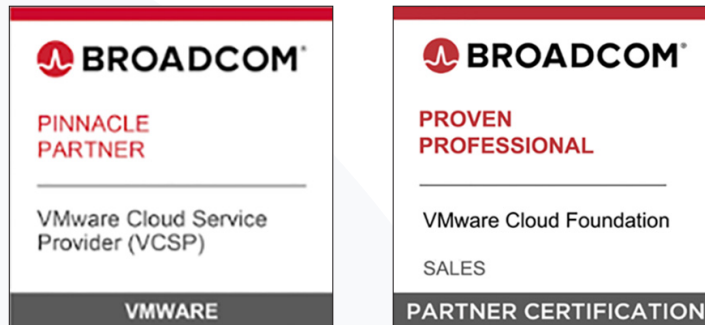

Resilience You Can Rely On

Disaster recovery options powered by VMware Live Site Recovery (VLSR) and HPE Zerto safeguard critical infrastructure and data. Advanced failover and recovery ensure your business stays running, no matter what.

Why TierPoint

TierPoint has been deploying and managing VMware Cloud Foundation (VCF) environments for years, giving clients confidence that their private clouds are built on proven expertise. Today, we manage over 700 customer private clouds and have successfully migrated over 10,000 VMware workloads, from simple lift-and-shift projects to complex, regulated environments. Additionally, our private cloud disaster recovery experts manage over 2,000 VMs for clients to help them quickly recover from outage events.

Our VMware-certified team not only keeps private clouds running optimally but also delivers end-to-end migration services to help businesses modernize with minimal risk and downtime. Backed by our VMware Pinnacle Partner status and a nationwide network of 40+ enterprise-grade data centers, TierPoint provides the experience and scale to help organizations design, migrate, and manage their VMware strategy with confidence.

Compliant and Secure

Your private cloud runs in TierPoint's enterprise-grade data centers, which maintain certifications such as ISO 27001, SOC 1 Type II, SOC 2 Type II, PCI DSS, and HIPAA. These compliant facilities, combined with dedicated infrastructure, help support data sovereignty and regulatory requirements.

Physical security is built in, with 24x7 staffing, biometric access controls, mantraps, and video surveillance. To ensure availability, you benefit from a 99.99% uptime SLA for hosted private cloud services and a 100% uptime SLA for critical data center infrastructure components, including power, cooling, and managed bandwidth.
