

# APPLICATION MANAGEMENT

**Let TierPoint manage your applications so you can focus on your core business.**

Licensing. Version control. Patch management. User access. Managing the applications that sit “above the OS” is a time-consuming task that can pull your IT team away from other more important initiatives. If you’re already using TierPoint Managed Services to manage other aspects of your critical IT infrastructure, Application Management may be your next step toward a more agile, innovative IT organization.

**We are experts at managing today's complex IT environments.**

Today's IT environments include a wide range of applications from multiple vendors. Managing these environments requires people who understand not just the applications, but also how they interact with each other. That's TierPoint.

Here's a subset of some of the most popular applications supported by our team:
