

CLEANIP ANTI-VIRUS (AV)

A single layer of defense is not enough for the constantly evolving threat landscape. CleanIP AV has the ability to detect malware pre-execution, during execution and post-execution.

Cybersecurity is constantly evolving with new attack methodologies and never before seen threats. Attacks and breaches targeting businesses have continued to escalate at unprecedented rates. Companies and security professionals must work in close alignment to better address data privacy, as well as validate that security controls are offering necessary protection of critical assets.

TierPoint's CleanIP AV provides advanced protection for your company's data with continuous safeguarding against viruses, spam and malware for workstations and servers for Windows and Linux. A multilayered protection, CleanIP AV combines machine learning for the best level of protection possible and is constantly adjusting and updating to provide the best balance of detection, false positives and performance.

Protect Against Ransomware Attack

An additional layer of defense protecting users from ransomware, that monitors and evaluates all applications based on behavior and reputation, that detects and blocks processes that resemble the behavior of ransomware.

Detect Suspicious Behavior

Our Host-Based Intrusion Prevention System monitors system activity and uses a predefined set of rules to recognize and stop suspicious system behavior.

Block Malicious Botnets

Our enhanced botnet protection detects, blocks and reports any malicious botnet communication.

Shield Your Network

Network Attack Protection improves detection of known vulnerabilities at the network level. A layer of protection against spreading malware, network-conducted attacks, and exploitation of vulnerabilities for which a patch has not yet been released.

Strengthen Your Team

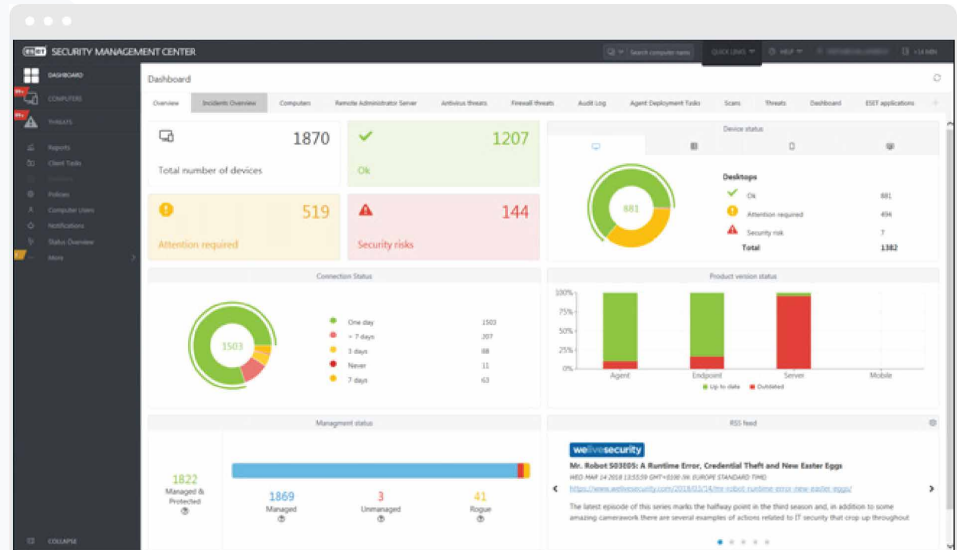

Our team of specialized security professionals help with installation and with defining the security configuration policies your business needs. We deliver 24x7 administration support and continuous security monitoring to safeguard your data and meet compliance regulations.

Increase Visibility

Gain real-time network security visibility, with weekly and customized reporting capabilities, and security management from a single screen.

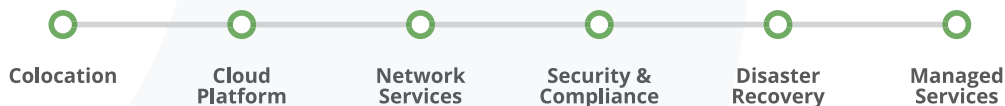

Security Management Center

All Clean IP endpoint solutions are managed from a single pane of glass - Security Management Center - where you can access stats, reporting and configure policies.

A Full Suite of Expertise and Managed Services

Along with private, public, multitenant, and hybrid clouds, TierPoint offers an extensive portfolio of managed services and data center solutions. As your IT strategy evolves, we meet you where you are and help you along your journey.
