

FACT SHEET

TIERPOINT CLEANIP™ MANAGED MULTI-FACTOR AUTHENTICATION

Deliver simple, secure access to all applications - for any user, from any device, from anywhere.

The rise of mobile workers and the dawn of edge to edge cloud require organizations to provide users secure and reliable access to applications from any device on any network. Since passwords are often the weak link in user security, two-factor authentication is needed to protect users and enable a secure and quick login that reduces exposure to hacking threats. Security should be simple to deploy and seamless to use. TierPoint CleanIP™ Managed Multi-Factor Authentication (CleanIP MMFA) is a single managed solution designed to ensure only trusted users and trusted devices can access every application.

CleanIP MMFA Standard

TierPoint's CleanIP Managed Multi-Factor Authentication establishes trust in users' identities and protects every user with a reliable, easy-to-use experience. Traditional MFA can take months to deploy, and with ongoing management, total cost of ownership increase. CleanIP MMFA powered by DUO, delivers speed to security and lower costs with a faster, cloud-based deployment, as well as simplified authentication for users and admins and quick, push notification-based approvals with support for smartphones, smartwatches and U2F tokens. CleanIP MMFA is easy to deploy, scales up to meet the needs of even the most diverse user base, and delivers insights summarizing the security posture of your devices. And secure single sign-on gives your users an easy way to access their applications from a single portal while giving you control with granular risk-based access policies for each application.

CleanIP MMFA Advanced

TierPoint's CleanIP MMFA Advanced takes everything in the CleanIP MMFA Standard solution and supercharges it. It delivers detailed visibility into the security hygiene of every device, gives your users a seamless and secure single sign-on experience and lets you quickly conduct phishing vulnerability assessments and simulations to determine where phishing risks exist in your organization. CleanIP MMFA Advanced packs intelligence to check devices for secure, up-to-date software; enabled security settings on mobile devices; and location and network data – actionable data that's available through the Device Insight dashboard. You can set policies for groups to allow or restrict access and secure BYOD environments by encouraging users to update their software. It's complete visibility without the need for agents.

CleanIP MMFA can:

Minimize Security and Compliance Risks – Improve security while supporting most regulatory and compliance frameworks in your environment.

Improve Productivity and Experience – Scale security that is simple to use easy to deploy and easy to manage.

Reduce Total Cost of Ownership – Manage overhead at a lower cost of ownership to efficiently and affordably deploy security best practices.

Enable Organizations Agility – Modern security that requires minimal infrastructure to deploy, providing ease of use.

CleanIP Managed Multi-Factor Authentication	CleanIP MMFA STANDARD	CleanIP MMFA ADVANCED
Trusted Users		
Protect Logins with two-factor authentication	•	•
Easily enroll and manage users	•	•
Automate Management of your Duo Solution (i.e. admins APIs)	•	•
Enforce role-based access policies		•
Identify user Vulnerable to phishing		•
Trusted Devices		
Overview of device security hygiene	•	•
Identify and monitor risky devices		•
Control application access based on device hygiene		•
Encourage users to update their own devices		•
Identify corporate vs. personal devices		•
Control application access based on device certifications		•
Every Application		
Protect on-premises apps	•	•
Protect federated cloud apps	•	•
Secure single sign-on (SSO)	•	•
Telephony credits <i>all accounts start with 100 credits</i>		100 credits/user/year
