ASSESSMENTS AND MIGRATION SERVICES

Transform your IT faster, with fewer risks and less downtime.

TierPoint offers advanced strategic and advisory services to our clients to help remove the headaches and roadblocks associated with adopting and utilizing hybrid technology solutions. By partnering with our clients to understand their business challenges and requirements, we are able to address their evolving needs with expert advice, strategically designed IT solutions and comprehensive migration services.

Our Approach

Whether you're migrating to the cloud for the first time or just realigning your multi-cloud strategy to the needs of your business, careful planning can ensure a successful migration. TierPoint Professional Services can be your guide through these four important phases:

1 **Assessment**

A vital first step of any migration project, the assessment phase looks at the objectives of the project, the current state of your infrastructure, and any challenges that will need to be addressed.

2 **Roadmap**

The roadmap phase turns the findings from the assessment into concrete plans. We map how the organization will transition from its current state to a desired future state-with minimal disruption to the business.

3 **Migration**

Throughout this stage, we'll work with your team to conduct a series of readiness tests, develop contingency plans and ensure everyone is aware of the steps and the order they'll take place. After the plan is established and testing is complete, our team begins moving workloads.

4 **Management**

Before our job is done, we will review the migration process and lessons learned, document the design and migration, and ensure a thorough knowledge transfer to key personnel.

TierPoint Assessment and Migration

TierPoint's Assessment and Migration Services aren't all-or-nothing. Many of our clients start out with one or more of these services to help them build a business case for migrating to a hybrid environment or as the foundation for their own migration project. Here are some of the most commonly used services:

Cloud Readiness Assessment: A deep analysis of your current environment, the cloud readiness assessment is the first step to a successful migration. We use a variety of tools to assess your current environment and design strategies that will increase efficiency, improve your cost structure, and help you reach your business objectives. Basic and Advanced levels of assessments are available. A typical assessment includes the following deliverables:

- Device Inventory
- Network Dependencies
- Application Inventory
- Cloud Readiness Report
- Issue Report with Potential Solutions
- Application Stack Groupings and Dependencies
- Projected Cost Modeling
- 30 Days of Performance Metrics and Utilization
- Hybrid IT Analysis
- Cloud Migration Plan

Cloud Readiness Workshop: This on-site workshop will take your project leads through all aspects of a cloud transformation including analyzing your business goals and desired future state, current environment and workloads, support structures, application mobility, cost modeling, organizational readiness, risk mitigation and the technology needed to support the transformation.

Cloud Migration: Utilizing our four-phase approach, we can move your workloads to the cloud or between clouds-including a TierPoint hosted cloud, Microsoft Azure or AWS-we ensure a smooth transition of application and cloud assets. For complex environments, it is common to employ several different methodologies to fit the unique needs of your technology landscape.

Physical Migrations: Experienced professionals will move your assets into one of our 40 managed data centers. Utilizing best-practice, multiple-wave methodology, our data center relocation services offer end-to-end management of the move including device packing/unpacking, port mapping, cable management, insurance, transportation, re-racking and certification.

Business Continuity Planning: Our experienced team can perform a business impact analysis to develop or update your business continuity plan to ensure it covers risks to your growing business and IT environment, implements best-practice business continuity strategies and keeps your organization compliant with regulations and standards.

Security Assessments: Highly certified consultants can engage our security experts and partners to provide the best security solutions for your needs. Measuring your security controls against best practices then reviewing tools and architectures our teams can identify a roadmap to fill the gaps.
