

Digital Transformation & IT Services for

FINANCIAL SERVICES COMPANIES

Financial services companies including banks, credit unions, investment firms, financial advisors, and insurance agencies need to provide customer-friendly services across the Internet, devices, and physical locations.

Consumers expect personalization and easy access. The availability of current technologies – including AI and big data management – enable you to offer new services, such as digital customer support, automated wealth management, customer verification and open bank data. At the same time, you may be held back by an outdated IT infrastructure and underutilized data sets. Security and compliance are essential. All of these can impact your ability to deliver high-quality service and customer satisfaction.

Free your team to focus on building client experiences that drive revenue while partnering with TierPoint to manage time-consuming IT activities. Our experts will become an extension of your team and provide strategic IT guidance and experience in diverse skill sets including cloud migration and cybersecurity.

What You Need:

Improve Data Management

Many financial firms are flooded with data. Your ability to analyze data and generate business insight has a direct effect on success. Powerful data analytics can help improve customer satisfaction. Hyper-personalization depends upon detailed data analysis and a modern IT infrastructure. With the right tools and IT infrastructure, you can leverage an ever-growing volume of information to make smarter decisions and deliver innovative services. Secure cloud services deliver more scalable, high-performance storage and IT analytics at lower total cost (TCO) than on-premises solutions.

Grow While Maintaining Security

Technology decisions impact many types of risk: strategic, compliance, operational, financial, and reputational. Digital transformation can deliver engaging customer experiences and valuable insight – but financial information must be kept secure at all times. Businesses and consumers want an experience that is frictionless, fast, and self-service – and that keeps their data safe. Your financial services enterprise needs to grow while protecting valuable data – customer loyalty and shareholder returns depend upon it.

Streamline IT Infrastructure

Through mergers and acquisitions (M&A) and growth over time, your IT infrastructure may be pieced together from disparate and disconnected systems, with limited automation. An IT overhaul can improve your business performance and drive efficiencies – so your business can spend less time on administration and maintenance and be free to create innovative services that engage customers and drive revenue.

How TierPoint Can Help:

Cloud Services

Cloud-based technologies can help you deliver enhanced digital experiences to meet customer expectations, while managing stringent industry regulations for sensitive data. Our team of experts can help design, build and manage your cloud environment so you can confidently host mission-critical applications in the cloud.

Recovery Services

Customized recovery solutions help ensure the resilience of your business-critical data, applications, and infrastructure – and maximize business continuity. Leverage a disaster recovery solution to ensure the continuous availability and security of data and IT systems.

Colocation & Data Center Services

Our footprint of secure, compliant data centers is ideal for housing your legacy infrastructure or cloud environments. Meet regulatory requirements for financial services while also helping to ensure your apps and data are always available. Our facilities are backed by an industry leading SLA of 100% uptime for infrastructure components.

Security & Compliance

Manage risk and secure sensitive data with a proactive, multi-layered security approach. Our experts can help financial services companies develop a strategy and deploy technologies that help meet regulatory compliance requirements including PCI-DSS, GLBA and Sarbanes-Oxley.

TierPoint helps many financial services companies with regulatory compliance requirements including GLBA and PCI-DSS:

Our Customers

“ As our needs changed, the old system just didn't work for us anymore. We needed a total reboot: that's what TierPoint's hyperconverged, hybrid cloud did for us.” ”

Greg Bugaj
Chief Information Officer, RMS

About TierPoint

Meeting clients where they are on their journey to IT transformation, TierPoint (tierpoint.com) is a leading provider of secure, connected data center and cloud solutions at the edge of the internet. The company has one of the largest customer bases in the industry, with thousands of clients ranging from the public to private sectors, from small businesses to Fortune 500 enterprises. TierPoint also has one of the largest and most geographically diversified footprints in the nation, with over 40 world-class data centers in 20 U.S. markets and 8 multitenant cloud pods, connected by a coast-to-coast network. Led by a proven management team, TierPoint's highly experienced IT professionals offer a comprehensive solution portfolio of private, multitenant, managed hyperscale, and hybrid cloud, plus colocation, disaster recovery, security, and other managed IT services.
