

Cloud to Cloud Recovery

Disaster Recovery as a Service (DRaaS)

Achieve IT Resilience with Disaster Recovery Automation for Diverse Environments

TierPoint's Cloud to Cloud Recovery (DRaaS) solutions flexibly fit your unique mix of recovery time objective (RTO), recovery point objective (RPO), production environment, and recovery environment requirements. Automation provides peace of mind. Your organization can test your DR solution anytime, quickly recover from a cyberthreat or outage into an enterprise-class recovery environment and use your recovery environment for as long as you want.

Businesses depend on data, applications and infrastructure, so data backup alone is not enough. Cloud-based disaster recovery is among the fastest-growing cloud services, and DRaaS enables recovery of your data, applications and infrastructure – all within minutes. You can achieve more control over your recovery plan, replication, and failover with TierPoint DRaaS.

High-Availability Cloud to Cloud Recovery

TierPoint's customized cloud-to-cloud recovery solutions powered by Zerto's IT Resiliency Platform protect your virtualized workloads and offer a variety of configurations with failover to private, multitenant, and public clouds.

Enterprise-Class Recovery

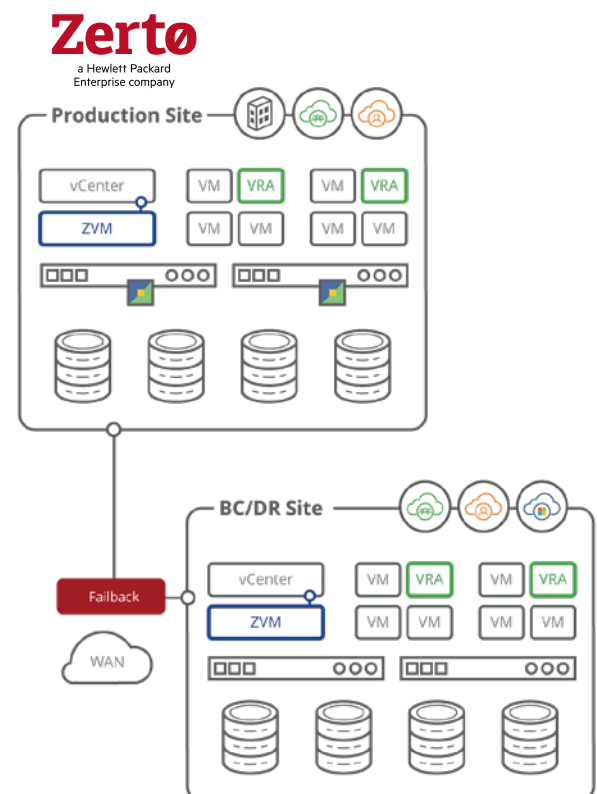

Replication protects your virtualized production environments and allows rapid failover to an enterprise-class cloud such as a TierPoint private or multitenant cloud, a subscription DR service, or a hyperscale cloud such as Azure or AWS. Use your cloud-based recovery environment as little or as much as you like, and for as long as you need.

Secure and Compliant

Cloud environments hosted in TierPoint data centers benefit from the best-practice physical security and compliance enforced in all our facilities. Non-disruptive testing and reporting helps satisfy PCI, HIPAA and more. TierPoint can also help safeguard every layer within your environment with IT security services.

Managed Service and Self-Service

Managed services deliver best-in-class technology and skillsets while freeing your IT staff for strategic projects. Select a fully managed solution or an easy-to-use self-service testing and recovery approach, as you prefer.

Your Expert Partner

Beyond cloud-to-cloud recovery, TierPoint's highly experienced IT professionals deliver a full set of disaster recovery services, including Azure Site Recovery, server-to-cloud recovery, recovery for IBM and Oracle systems, and backup services. TierPoint also provides cloud, colocation, networking, security, and managed IT services.

Meet Your Recovery Objectives

Whether you need near instantaneous or less frequent sync points, or a recovery that is near instantaneous or a few hours or longer, your TierPoint recovery team will create a DRaaS recovery solution that reduces complexity, minimizes data loss and downtime, and fits your unique requirements and budget.

Highly Available

We support our clients with a 99.99% uptime availability SLA plus an industry-leading SLA of 100% uptime for data center infrastructure components, including HVAC systems, power systems, and managed bandwidth with redundant connections.

Simple and Secure Recovery Services

Recovery Target Options – Take control of your recovery with a customized cloud-to-cloud recovery solution powered Zerto's IT Resiliency Platform with failover to a TierPoint private or multitenant cloud or a hyperscale cloud.

Ease of Management – Select from fully managed or self-service testing and recovery solutions.

Always-on Replication – Deploy Virtual Replication Appliances on each hypervisor host, to provide software-defined scalability, replication, and recovery.

Proven Protection – Ensure you always have a clean copy of data somewhere. Block-level replication protects your data while journals deliver point-in-time recovery with seconds of granularity.

Full suite of recovery services – Choose custom recovery services covering physical and virtualized workloads, data backup, business continuity seating and recovery services for IBM i, p, and z environments.

“The solution provided by TierPoint was exactly what I needed. I struggled for years failing audits for not having offsite storage of backups and a DR plan. Their product resolved all of my issues, including having the ability to do non-intrusive DR testing.”
